NanOZmix-DIY(Spleen)
(Dried lipid mix as Do It Yourself (DIY) Lipid Nanoparticle (LNP))

Description

Ready-to-use dried lipid mix at the total lipid concentration of 25 mM when reconstituted in 1mL ethanol, for LNP-mRNA formulation.

LNPs represent the most effective and safe delivery systems for the translational success of nucleic acid drugs. LNPs are lipidic spherical vesicles formed by a combination of four main components: an ionizable cationic lipid, a helper phospholipid, cholesterol & a pegylated lipid, each having distinct functions (**Fig.1**). LNPs not only protect RNA from degradation but also facilitate intracellular uptake and thus potentiate its efficacy. **LNP/RNA** systems self-assemble *via* electrostatic interactions between negatively charged RNA and ionizable cationic lipids.
NanOZmix-DIY(Spleen) is designed for the development of LNP by customers at their ease by using different formulation methods at different N/P ratio. With our **NanOZmix-DIY(Spleen)** system, customers can produce themselves a monodisperse LNP encapsulating mRNA within the size range of 50 nm to 200 nm through microfluidic/ impingement jets mixing (IJM)/T-junction mixing technology with an encapsulation efficiency of 80-96 % under optimized conditions.

Applications

Preparation of 25 mM ethanolic lipid mix stock

Bring the dry film of **NanOZmix-DIY(Spleen)** at room temperature from -20°C. Add 1 mL of ethanol in it and vortex it until you see a clear solution. If you see signs of precipitation, try to sonicate or heat the ethanolic solution at 60°C for 1-2 min and vortex again.

Refer to the **LNP-DIY protocol** data sheet for more information.

Certificate of analysis on demand.

Use, handling and storage

For Research Use Only. Not for use in humans. Not for use in diagnostic or therapeutic purposes.

NanOZmix-DIY(Spleen) must be stored at -20°C as a dried film and at -80°C as ethanolic solution. Dried lipidic film can be stored for 6 months whereas ethanolic solution must be used within one month.

Kit contents

LDIY012S: Dried 25 mM lipid mix.
